JavaScript Assignment 1

Note: Kindly submit your assignment on or before 21st July 2026 on Google Drive Link -

<https://drive.google.com/drive/folders/17Ja2rH8KqsT0HZjnieS6JfAGiwHEDqUf?usp=sharing>

Kindly prepare a PDF of the assignment solution. Save the PDF using your Enrollment Number as the file name and upload it to drive line.

1. Create an squareandcube.html page with one textbox and two buttons (SQUARE, CUBE). Accept number in the textbox and on SQUARE button click calculate square and on CUBE button click calculate cube of that number. Alert the result with appropriate message.

Enter number :

2. Create calculator.html page and design a simple calculator given below. On any button click call a function and in function fetch the value of both textboxes and write logic to perform the particular operation. Display appropriate result in the above given result section.

Enter num1 :

Enter num2 :

Operations:

Result:

3. Create an area.html page with one textbox and button. Accept radius in the textbox and on button click calculate the area and circumference of circle.
(Hint $PI = 3.14$ Constant) ($area = PI * r * r$ and $circumference = 2 * PI * r$)
4. Write a javascript code to take a number as input and print whether it is positive, negative, or zero.
5. Create a evenodd.html page and write a JavaScript for loop that will iterate from 1 to 15. For each iteration, it will check if the current number is odd or even, and display a message to the screen.
Sample Output:
"1 is odd"
"2 is even"
6. Create a printmsg.html page and write a JavaScript for loop that will iterate from 1 to 100. Check each number in the loop if number is divisible by 3 then display message "Number is divisible by 3" or if number is divisible by 5 then display message "Number is divisible by 5" or if number is divisible by both 3 and 5 then display message "Number is divisible by 3 and 5 both" on button click.
7. Write a JavaScript function that returns true if there is at least one prime number in the given range ($n1$ to $n2$), otherwise return false.
Input – $n1=10$ and $n2= 15$
// should return true because in this range 11 and 13 are the Prime numbers

Input – $n1= 8$ and $n2 = 10$
// should return false because in this range no Prime numbers
